

Actinin, alpha 4 (ACTN4)

Specific Reagents

The biological roles of ACTN4 have strong clinical implications in cancer metastasis and tumorigenesis. Amplification of *ACTN4* and the overexpression of its protein in cancer are utilized as biomarkers. With ACTN4 acting as a prognostic factor, Abnova's ACTN4 DNA probe has been widely used by researchers to investigate its amplification in lung adenocarcinoma, ovarian cancer and pancreatic cancer through FISH analysis. A companion Class I *In Vitro* Diagnostic (USA) ACTN4 monoclonal antibody was also designed for immunohistochemistry experiment to detect the correlation between protein overexpression and invasion of cancer cells with high sensitivity and specificity.

Product Information

Product	ACTN4 DNA Probe	Anti-ACTN4 Monoclonal Antibody (IVD)
Cat. No.	DF0001	DH0003
Usage	For detection of ACTN4 gene amplification using fluorescence <i>in situ</i> hybridization	For detection of ACTN4 protein overexpression using immunohistochemistry

Application: DNA Hybridization

Human lung adenocarcinoma stained with ACTN4 DNA Probe.

Human ovarian cancer stained with ACTN4 DNA Probe.

Human pancreatic cancer stained with ACTN4 DNA Probe.

Application: Immunohistochemistry

Human lung adenocarcinoma stained with ACTN4 monoclonal antibody.

Human ovarian cancer stained with ACTN4 monoclonal antibody.

Human pancreatic cancer stained with ACTN4 monoclonal antibody.
